

# PA2 SIP Video Intercom & Paging Gateway User Manual V2.0

Document VER	Firmware VER	Explanation	Time
V1.0	2.1.1.2924	Initial issue	20170804
V.2.0	2.1.1.2924	Increase the interface parameters, modify the company address, increase the QIG IP scanning tool download address	20171027

## Safety Notices

1. Please use the specified power adapter. If you need to use the power adapter provided by other manufacturers under special circumstances, please make sure that the voltage and current provided is in accordance with the requirements of this product, meanwhile, please use the safety certificated products, otherwise may cause fire or get an electric shock.
2. When using this product, please do not damage the power cord either by forcefully twist it, stretch pull, banding or put it under heavy pressure or between items, otherwise it may cause damage to the power cord, lead to fire or get an electric shock.
3. Before using, please confirm that the temperature and environment is humidity suitable for the product to work. (Move the product from air conditioning room to natural temperature, which may cause this product surface or internal components produce condense water vapor, please open power use it after waiting for this product is natural drying).
4. Please do not let non-technical staff to remove or repair. Improper repair may cause electric shock, fire, malfunction, etc. It would lead to injury accident or cause damage to your product.
5. Do not use fingers, pins, wire, other metal objects or foreign body into the vents and gaps. It may cause current through the metal or foreign body, which may even cause electric shock or injury accident. If any foreign body or objection falls into the product please stop using.
6. Please do not discard the packing bags or store in places where children could reach, if children trap his head with it, may cause nose and mouth blocked, and even lead to suffocation.
7. Please use this product with normal usage and operating, in bad posture for a long time to use this product may affect your health.
8. Please read the above safety notices before installing or using this phone. They are crucial for the safe and reliable operation of the device.

## I. Product introduction

PA2 is a SIP video intercom & Paging device for industry application. The media stream transmission adopts standard IP/RTP/RTSP protocol. It inherits the advantages of the stability and the sound quality of FANVIL VOIP Phone. It is perfectly compatible with all the current SIP IPPBX /IMS platforms, such as Asterisk, Broadsoft, 3CX, Elastix, etc. It has various functions and interfaces, Such as Intercom, broadcast, video , security, recording, to adapt different application environment, you can very easy to DIY your video intercom & paging equipment. PA2 is the best choice for everyone.

### 1. Appearance of the product

### 2. Description

Label	Description	Label	Description	Label	Description
①	Speaker interface	②	Headset interface	③	LED interface
④	Function key interface	⑤	Microphone interface	⑥	Switch input interface
⑦	Switch output interface	⑧	Power input interface	⑨	Camera interface
⑩	Ethernet interface	⑪	Registration/Network LED	⑫	Volume control key
⑬	Restore factory key	⑭	Recording output interface	⑮	Grounding screw

## II. Start Using

Before you start to use the equipment, please make the following installation.

### 1. Confirm the connection

Confirm whether the equipment of the power cord, network cable and the boot-up is normal. (Check the network state of light

Label	Explanation
① Speaker interface	according to the device input voltage adaptive output maximum power; 4Ω speaker, POE / 10W, 12V / 10W, 18V / 20W, 24V / 30W. The greater the horn impedance, the smaller the output power. Suggested wire diameter: 18AWG or larger diameter.
② Headset interface	Speaker audio line signal output impedance 32 Ohm, single ended output voltage 1.2V, used for external headphones or active speakers
③ LED interface	Output 5V voltage 5 mA current, can be an external LED, indicating the network status, call status, registration status.
④ Function key interface	connection switch, you can log on page set the call number or IP address.
⑤ Microphone interface	Recommend the use of 2.2K Ohm impedance electret condenser microphone, sensitivity: -38dB, bias voltage 2.2V. <b>Microphone signal cable it is recommended to use a shielded cable and do not connect the shield cable to the grounding screw, improve anti-interference.</b>
⑥ Switch input interface	Connect an infrared probe or emergency switch or Doorsensor and other switch components.
⑦ Switch output interface	corresponding to the short-circuit input interface, login device security page settings, you can control the alarm light, electric locks and other equipment; with the adjacent ⑧ power port connection for external equipment power supply.
⑧ Power input interface	12V ~ 24V 2A input, according to the input voltage to determine the maximum output power amplifier.
⑨ Camera interface	standard RJ45 interface, connect the original camera, the proposed use of five or five sub-network cable
⑩ Ethernet interface	WAN port, standard RJ45 interface, 10 / 100M adaptive, support POE input, it is recommended to use five or super five network cable.
⑪ Registration/Network LED	indicates network status, call status, registration status. Fast flashing: network anomaly or SIP account exception. Slow flashing: during a call. Always bright: successful registration.
⑫ Volume control key	standby to adjust the volume of the ringtone, call only adjust the call volume, broadcast only adjust the broadcast volume. Long press the volume down key to broadcast the IP address. Long press the volume plus key to switch the IP address acquisition mode (specific operation see below search door phone).
⑬ Restore factory key	press and hold for 3 seconds to flash the device to restart and restore the factory settings.
⑭ Recording output interface	the local microphone voice and call voice mixed output, suitable for computer and other equipment recording.

**15 Grounding screw**

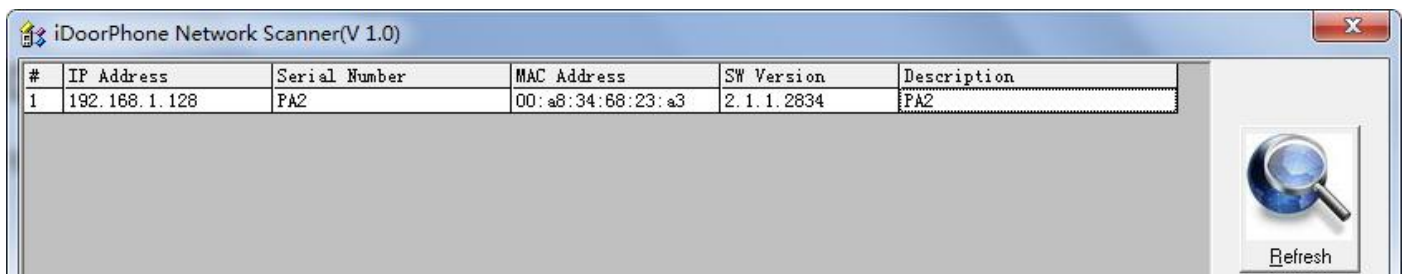

external parts metal housing needs to be connected to this interface to prevent static electricity and other interference caused the equipment to work abnormally. (Except microphone accessories)

## 2. Quick Setting

The product provides a complete function and parameter setting. Users may need to have the network and SIP protocol knowledge to understand the meaning all parameters represent. In order to let equipment users enjoy the high quality of voice service and low cost advantage brought by the device immediately, here we list some basic but necessary setting options in this section to let users know how to operate device without understanding such complex SIP protocols.

In prior to this step, please make sure your broadband Internet can be normally operated, and you must complete the connection of the network hardware. The product factory default network mode is static IP address 192.168.1.128.

- Press and hold volume down key for 3 seconds; the door phone would report the IP address by voice. Or you can also use the "iDoorPhoneNetworkScanner.exe" software to find the IP address of the device.(download address <http://download.fanvil.com/tool/iDoorPhoneNetworkScanner.exe>)
- Long press the volume plus key for 10 seconds, the speaker issued a rapid beep, and then quickly press the three volume plus the key, beep stopped. Wait 10 seconds, Successfully switch to dynamic IP after the system automatically voice broadcast IP address. Switching again will become a fixed IP address.
- Note: when the device is powered on, 30s waiting is needed for device running.
- Log on to the WEB device configuration.
- In a line configuration page, service account, user name, server address and other parameters are required for server address registration.

## III. Basic operation

### 1. Answer a call

When a call comes in, the device would answer automatically. If you cancel auto answer feature and set auto answer time, you would hear the ring at the set time and the device would auto answer

after configured timer.

## 2. Call

Configure Function key as hot key and then set up a number; after that you might press the Function key for making call to the configured extension(s).

## 3. End call

Enable Release (You can set Function key to Release) key for hanging up feature to end call.

## 4. Security linkage

- ◆ switch input interface received a door or emergency button and other sensor signals, the output port connected to the alarm lights or electric locks and other equipment will automatically respond to the server and send alarm information.
- ◆ The output port defaults to the call automatically triggers the response and supports call triggering with DTMF number triggering and short message triggering.

## 5. Video linkage

- ◆ Use other manufacturers camera please connect to the switch, the device ⑨ interface can only connect the original camera.
- ◆ Landing page configuration camera user name, password, port number and other information. For more information, please refer to the [Video](#) settings

## IV. Page settings

### 1. Browser configuration

When the device and your computer are successfully connected to the network, you might enter the IP address of the device in the browser as <http://xxx.xxx.xxx.xxx/> and you can see the login interface of the web page management.

Enter the user **admin** and password **admin** and click the Logon button to enter the settings screen.

User:   
 Password:   
 Language: English

## 2. Password Configuration

There are two levels of access: root level and general level. A user with root level can browse and set all configuration parameters, while a user with general level can set all configuration parameters except server parameters for SIP.

- General level: It is not be set by default, you can add the feature when you need
- User uses root level by default:
  - ◆ User name: admin
  - ◆ Password: admin

## 3. Configuration via WEB

### (1) System

Line 1	5529	Registered										
Line 2	N/A	Inactive										

Information	
Field Name	Explanation
System Information	Display equipment model, hardware version, software version, uptime, last uptime MEMInfo and system time.
Network	Shows the configuration information of WAN port, including connection mode of WAN port (Static, DHCP, PPPoE), MAC address, IP address of WAN port.
SIP Accounts	Shows the phone numbers and registration status of the 2 SIP LINES.

## b) Account

Through this page, administrator can add or remove user accounts depend on their needs, or modify existed user accounts permission.

Account	
Field Name	Explanation
<b>Change Web Authentication Password</b>	You can modify the login password of the account
<b>Add New User</b>	You can add new user
<b>User Accounts</b>	Show the existed user accounts' information

## c) Configurations

Configurations	
Field Name	Explanation
Export Configurations	Save the equipment configuration to a txt or xml file. Please right click on the choice and then choose "Save Link As."
Import Configurations	Find the config file, and press <b>Update</b> to load it to the equipment.
Reset to factory defaults	PA2 would restore to factory default configuration and remove all configuration information.

## d) Upgrade

Upgrade	
Field Name	Explanation

## Software upgrade

Find the firmware, and press Update to load it to the equipment.

## e) Auto Provision

### Auto Provision

Field Name	Explanation
<b>Common Settings</b>	
Current Configuration Version	Show the current config file's version. If the config file to be downloaded is higher than current version, the configuration would be upgraded. If the endpoints confirm the configuration by the Digest method, the configuration would not be upgraded unless it differs from the current configuration
General Configuration Version	Show the common config file's version. If the configuration to be downloaded and this configuration is the same, the auto provision would stop. If the endpoints confirm the configuration by the Digest method, the configuration would not be upgraded unless it differs from the current configuration.
CPE Serial Number	Serial number of the equipment
Authentication Name	Username for configuration server. It is used for FTP/HTTP/HTTPS. If this is blank, the phone would use anonymous access
Authentication	Password for configuration server. It is used for FTP/HTTP/HTTPS.

Password	
Configuration File Encryption Key	Encryption key for the configuration file
General Configuration File Encryption Key	Encryption key for common configuration file
Save Auto Provision Information	Save the auto provision username and password in the phone until the server url changed
<b>DHCP Option</b>	
Option Value	The equipment supports configuration from Option 43, Option 66, or a Custom DHCP option. It may also be disabled.
Custom Option Value	Custom option number. It must be from 128 to 254.
<b>SIP Plug and Play (PnP)</b>	
Enable SIP PnP	If it is enabled, the equipment would send SIP SUBSCRIBE messages to the server address when it boots up. Any SIP server compatible with that message would reply with a SIP NOTIFY message containing the Auto Provisioning Server URL where the phones can request their configuration.
Server Address	PnP Server Address
Server Port	PnP Server Port
Transportation Protocol	PnP Transfer protocol – UDP or TCP
Update Interval	Interval time for querying PnP server. Default is 1 hour.
<b>Static Provisioning Server</b>	
Server Address	Set FTP/TFTP/HTTP server IP address for auto update. The address can be an IP address or domain name with subdirectory.
Configuration File Name	Specify configuration file name. The equipment would use its MAC ID as the config file name if this is blank.
Protocol Type	Specify the Protocol type FTP, TFTP or HTTP.
Update Interval	Specify the update interval time. Default is 1 hour.
Update Mode	<ol style="list-style-type: none"> <li>1. Disable – not to update</li> <li>2. Update after reboot – update only after reboot.</li> <li>3. Update at time period – update at periodic update period</li> </ol>
<b>TR069</b>	
Enable TR069	Enable/Disable TR069 configuration
ACS Server Type	Select Common or CTC ACS Server Type.
ACS Server URL	ACS Server URL.

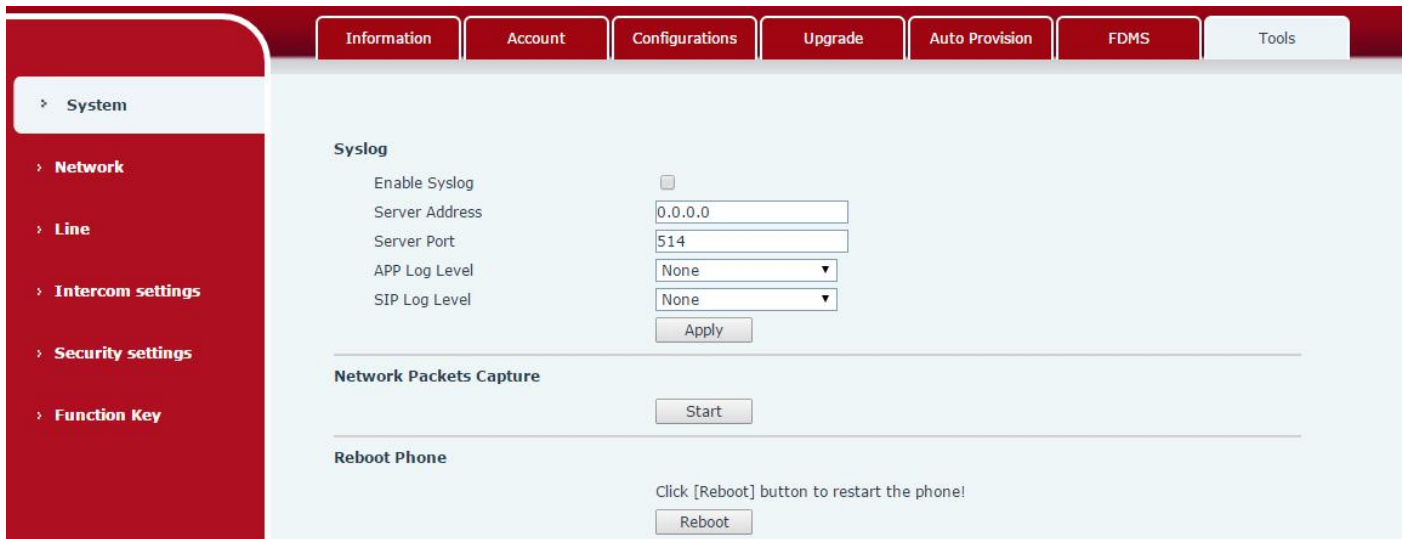

ACS User	User name of ACS.
ACS Password	ACS Password.
TR069 Auto Login	Enable/Disable TR069 Auto Login.
INFORM Sending Period	Time between transmissions of "Inform"; the unit is second.

## f) FDMS

<b>FDMS Settings</b>	
Enable FDMS	Enable/Disable FDMS configuration
FDMS Interval	The time to send sip Subscribe information to the FDMS server on a regular basis. Unit seconds
<b>Doorphone Info Settings</b>	
Community Name	The name of the community where the device is installed
Building Number	The name of the building where the equipment is installed
Room Number	The name of the room where the equipment is installed

## g) Tools

Syslog is a protocol used to record log messages using a client/server mechanism. The Syslog server receives the messages from clients, and classifies them based on priority and type. Then these messages would be written into a log by rules which the administrator has configured.

There are 8 levels of debug information.

Level 0: emergency; System is unusable. This is the highest debug info level.

Level 1: alert; Action must be taken immediately.

Level 2: critical; System is probably working incorrectly.

Level 3: error; System may not work correctly.

Level 4: warning; System may work correctly but needs attention.

Level 5: notice; It is normal but significant condition.

Level 6: Informational; It is normal daily messages.

Level 7: debug; Debug messages normally used by system designer. This level can only be displayed via telnet.

Tools	
Field Name	Explanation
<b>Syslog</b>	
Enable Syslog	Enable or disable system log.
Server Address	System log server IP address.
Server Port	System log server port.
APP Log Level	Set the level of APP log.
SIP Log Level	Set the level of SIP log.
<b>Network Packets Capture</b>	
Capture a packet stream from the equipment. This is normally used to troubleshoot problems.	
<b>Reboot Phone</b>	

Some configuration modifications require a reboot to become effective. Clicking the Reboot button would lead to reboot immediately.

Note: Be sure to save the configuration before rebooting.

## (2) Network

### a) Basic

The screenshot displays the 'Basic' configuration tab for the Network section. It is divided into three main areas: Network Status, Settings, and Service Port Settings. The Network Status section lists the current IP address, subnet mask, default gateway, MAC address, and MAC timestamp. The Settings section allows for selecting between Static IP, DHCP (which is selected), and PPPoE, and configuring DNS servers. The Service Port Settings section allows for selecting the Web Server Type (HTTP) and setting the corresponding HTTP and HTTPS ports. At the bottom, there is an option for the HTTPS Certification File, currently set to 'https.pem' with 'N/A' as the path, and buttons for 'Upload' and 'Delete'.

Field Name	Explanation
<b>Network Status</b>	
IP	The current IP address of the equipment
Subnet mask	The current Subnet Mask

Default gateway	The current Gateway IP address
MAC	The MAC address of the equipment
MAC Timestamp	Get the MAC address's time.
<b>Settings</b>	
Select the appropriate network mode. The equipment supports three network modes:	
Static IP	Network parameters must be entered manually and would not change. All parameters are provided by the ISP.
DHCP	Network parameters are provided automatically by a DHCP server.
PPPoE	Account and Password must be input manually. These are provided by your ISP.
If Static IP is chosen, the screen below would appear. Enter values provided by the ISP.	
DNS Server Configured by	Select the Configured mode of the DNS Server.
Primary DNS Server	Enter the server address of the Primary DNS.
Secondary DNS Server	Enter the server address of the Secondary DNS.
After entering the new settings, click the <b>Apply</b> button. The equipment would save the new settings and apply them. If a new IP address was entered for the equipment, it must be used to login to the phone after clicking the <b>Apply</b> button.	

## b) VPN

The device supports remote connection via VPN. It supports both Layer 2 Tunneling Protocol (L2TP) and OpenVPN protocol. This allows users at remote locations on the public network to make secure connections to local networks.

- > System
- > Network
- > Line
- > Intercom settings
- > Security settings

Apply

SIP	
Field Name	Explanation
<b>Basic Settings</b> (Choose the SIP line to configured)	
Line Status	Display the current line status at page loading. To get the up to date line status, user has to refresh the page manually.

Username	Enter the username of the service account.
Display name	Enter the display name to be sent in a call request.
Authentication Name	Enter the authentication name of the service account
Authentication Password	Enter the authentication password of the service account
Activate	Whether the service of the line should be activated
SIP Proxy Server Address	Enter the IP or FQDN address of the SIP proxy server
SIP Proxy Server Port	Enter the SIP proxy server port, default is 5060
Outbound proxy address	Enter the IP or FQDN address of outbound proxy server provided by the service provider
Outbound proxy port	Enter the outbound proxy port, default is 5060
Realm	Enter the SIP domain if requested by the service provider
<b>Codecs Settings</b>	
Set the priority and availability of the codecs by adding or remove them from the list.	
<b>Advanced Settings</b>	
Subscribe For Voice Message	Enable the device to subscribe a voice message waiting notification, if enabled, the device will receive notification from the server if there is voice message waiting on the server
Voice Message Number	Set the number for retrieving voice message
Voice Message Subscribe Period	Set the interval of voice message notification subscription
Enable DND	Enable Do-not-disturb, any incoming call to this line will be rejected automatically
Blocking Anonymous Call	Reject any incoming call without presenting caller ID
Use 182 Response for Call waiting	Set the device to use 182 response code at call waiting response
Anonymous Call Standard	Set the standard to be used for anonymous
Dial Without Registered	Set call out by proxy without registration
Click To Talk	Set Click To Talk
User Agent	Set the user agent, the default is Model with Software Version.
Response Single Codec	If setting enabled, the device will use single codec in response to an incoming call request
Ring Type	Set the ring tone type for the line
Conference Type	Set the type of call conference, Local=set up call conference by the device itself, maximum supports two remote parties, Server=set up call conference by dialing

	to a conference room on the server
Server Conference Number	Set the conference room number when conference type is set to be Server
Transfer Timeout	Set the timeout of call transfer process
Enable Long Contact	Allow more parameters in contact field per RFC 3840
Use Quote in Display Name	Whether to add quote in display name
Use Feature Code	When this setting is enabled, the features in this section will not be handled by the device itself but by the server instead. In order to control the enabling of the features, the device will send feature code to the server by dialing the number specified in each feature code field.
Specific Server Type	Set the line to collaborate with specific server type
Registration Expiration	Set the SIP expiration interval
Use VPN	Set the line to use VPN restrict route
Use STUN	Set the line to use STUN for NAT traversal
Convert URI	Convert not digit and alphabet characters to %hh hex code
DTMF Type	Set the DTMF type to be used for the line
DTMF SIP INFO Mode	Set the SIP INFO mode to send '*' and '#' or '10' and '11'
Transportation Protocol	Set the line to use TCP or UDP for SIP transmission
Local Port	Set the Local Port
SIP Version	Set the SIP version
Caller ID Header	Set the Caller ID Header
Enable Strict Proxy	Enables the use of strict routing. When the phone receives packets from the server, it will use the source IP address, not the address in via field.
Enable user=phone	Sets user=phone in SIP messages.
Enable SCA	Enable/Disable SCA (Shared Call Appearance )
Enable BLF List	Enable/Disable BLF List
Enable DNS SRV	Set the line to use DNS SRV which will resolve the FQDN in proxy server into a service list
Keep Alive Type	Set the line to use dummy UDP or SIP OPTION packet to keep NAT pinhole opened
Keep Alive Interval	Set the keep alive packet transmitting interval
Enable Session Timer	Set the line to enable call ending by session timer refreshment. The call session will be ended if there is not new session timer event update received after the timeout period
Session Timeout	Set the session timer timeout period
Enable Rport	Set the line to add rport in SIP headers

Enable PRACK	Set the line to support PRACK SIP message
Enable DNS SRV	Set the line to use DNS SRV which will resolve the FQDN in proxy server into a service list
Auto Change Port	Enable/Disable Auto Change Port
Keep Authentication	Keep the authentication parameters from previous authentication
Auto TCP	Using TCP protocol to guarantee usability of transport for SIP messages above 1500 bytes
Enable Feature Sync	Feature Syncn with server
Enable GRUU	Support Globally Routable User-Agent URI (GRUU)
BLF Server	The registered server will receive the subscription package from ordinary application of BLF phone. Please enter the BLF server, if the sever does not support subscription package, the registered server and subscription server will be separated.
BLF List Number	BLF List allows one BLF key to monitor the status of a group. Multiple BLF lists are supported.
SIP Encryption	Enable SIP encryption such that SIP transmission will be encrypted
SIP Encryption Key	Set the pass phrase for SIP encryption
RTP Encryption	Enable RTP encryption such that RTP transmission will be encrypted
RTP Encryption Key	Set the pass phrase for RTP encryption

## b) Basic Settings

STUN – Simple Traversal of UDP through NAT –A STUN server allows a phone in a private network to know its public IP and port as well as the type of NAT being used. The equipment can then use this information to register itself to a SIP server so that it can make and receive calls while in a private network.

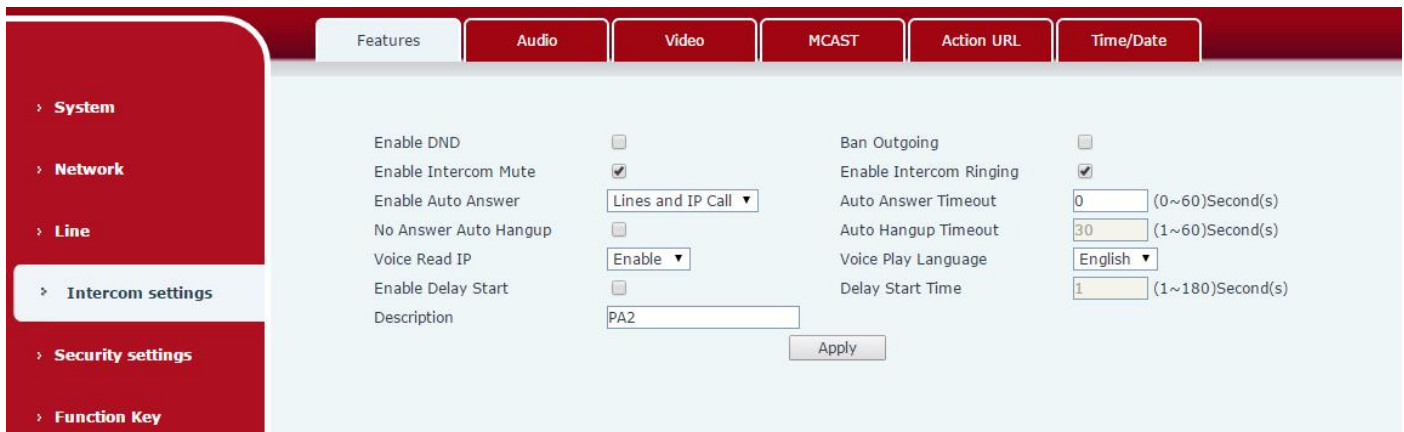

The screenshot shows the 'Basic Settings' page for SIP and STUN configurations. The left sidebar contains navigation links for System, Network, Line, Intercom settings, Security settings, and Function Key. The main content area is split into two sections: SIP Settings and STUN Settings. The SIP Settings section includes fields for Local SIP Port (5060), Registration Failure Retry Interval (32 seconds), and checkboxes for Enable Strict UA Match and Enable DHCP Option 120. The STUN Settings section includes a checkbox for STUN NAT Traversal (FALSE), a field for Server Address, a field for Server Port (3478), a field for Binding Period (50 seconds), and a field for SIP Waiting Time (800 milliseconds). Both sections have an 'Apply' button. At the bottom, the 'TLS Certification File' section shows the file name 'sips.pem', a status of 'N/A', and 'Upload' and 'Delete' buttons.

Basic Settings	
Field Name	Explanation
<b>SIP Settings</b>	
Local SIP Port	Set the local SIP port used to send/receive SIP messages.
Registration Failure Retry Interval	Set the retry interval of SIP REGISTRATION when registration failed.
Enable Strict UA Match	Enable or disable Strict UA Match
<b>STUN Settings</b>	
Server Address	STUN Server IP address
Server Port	STUN Server Port – Default is 3478.
Binding Period	STUN blinding period – STUN packets are sent at this interval to keep the NAT mapping active.
SIP Waiting Time	Waiting time for SIP. This will vary depending on the network.
<b>TLS Certification File</b>	
Upload or delete the TLS certification file used for encrypted SIP transmission.	
Note: the SIP STUN is used to achieve the SIP penetration of NAT, is the realization of a service, when the equipment configuration of the STUN server IP and port (usually the default is 3478), and select the Use Stun SIP server, the use of NAT equipment to achieve penetration.	

## (4) Intercom settings

### a) Features

Features	
Field Name	Explanation
<b>Basic Settings</b>	
Enable DND	DND feature can refuse all incoming calls for all SIP lines, or for individual SIP line. But the outgoing calls would not be affected
Ban Outgoing	If it is enabled, no outgoing calls can be made.
Enable Intercom Mute	If it is enabled, device would mute incoming calls during an intercom call.
Enable Intercom Ringing	If it is enabled, device would play intercom ring tone to alert that there is a new incoming call during an intercom call.
Enable Auto Answer	Enable Auto Answer function
Auto Answer Timeout	Set Auto Answer Timeout
No Answer Auto Hangup	Enable automatically hang up feature添加 when there is no answer
Auto Hangup Timeout	Configuration in a set time, the device would automatically hang up when there is no answer
Voice Read IP	Enable or disable voice broadcast IP address
Voice Play Language	Set language of the voice prompt
Enable Delay Start	Enable or disable the start delay
Delay Start Time	Set start delay time
Description	Device description displayed on IP scanning tool software or FDMS.

## b) Audio

This page configures audio parameters such as voice codec, speak volume, mic volume and ringer volume.

### Audio Settings

First Codec	<input type="text" value="G.722"/>	▼	Second Codec	<input type="text" value="G.711A"/>	▼
Third Codec	<input type="text" value="G.711U"/>	▼	Fourth Codec	<input type="text" value="G.729AB"/>	▼
Fifth Codec	<input type="text" value="None"/>	▼	Sixth Codec	<input type="text" value="None"/>	▼
DTMF Payload Type	<input type="text" value="101"/>	(96~127)	Default Ring Type	<input type="text" value="Type 1"/>	▼
G.729AB Payload Length	<input type="text" value="20ms"/>	▼	Tone Standard	<input type="text" value="United Stz"/>	▼
G.722 Timestamps	<input type="text" value="160/20ms"/>	▼	G.723.1 Bit Rate	<input type="text" value="6.3kb/s"/>	▼
Speakerphone Volume	<input type="text" value="5"/>	(1~9)	MIC Input Volume	<input type="text" value="5"/>	(1~9)
Broadcast Output Volume	<input type="text" value="5"/>	(1~9)	Signal Tone Volume	<input type="text" value="4"/>	(0~9)
Enable VAD	<input type="checkbox"/>				

### Speaker Settings !

Speaker	<input type="text" value="Panel Spe"/>	▼	External Speaker Power	<input type="text" value="10"/>	▼
---------	--	---	------------------------	---------------------------------	---

Audio Setting	
Field Name	Explanation
First Codec	The first codec choice: G.711A/U, G.722, G.723.1, G.726-32, G.729AB
Second Codec	The second codec choice: G.711A/U, G.722, G.723.1, G.726-32, G.729AB, None
Third Codec	The third codec choice: G.711A/U, G.722, G.723.1, G.726-32, G.729AB, None
Fourth Codec	The forth codec choice: G.711A/U, G.722, G.723.1, G.726-32, G.729AB, None
DTMF Payload Type	The RTP Payload type that indicates DTMF. Default is 101
Default Ring Type	Ring sound – there are 9 standard types and 3 user types.
G.729AB Payload Length	G.729AB Payload length – adjust from 10 – 60 msec.
Tone Standard	Configure tone standard area.
G.722 Timestamps	Choices are 160/20ms or 320/20ms.
G.723.1 Bit Rate	Choices are 5.3kb/s or 6.3kb/s.
Speakerphone Volume	Set the speaker call volume level.
MIC Input Volume	Set the MIC call volume level.
Broadcast Output Volume	Set the broadcast output volume level.
Signal Tone Volume	Set the audio signal output volume level.
Enable VAD	Enable or disable Voice Activity Detection (VAD). If VAD is enabled, G729 Payload length cannot be set greater than 20 msec.
<b>Speaker Settings</b>	

<p>Speaker</p>	<p>The Load speaker has two modes of selection: "panel speaker" or "external speaker". "Panel speaker" refers to the speaker and MIC are installed in the same shell, It is used for voice intercom, requires to get better two-way talking, so the audio output power need to be optimized, to ensure that the intercom sound quality; "External speakers" refers to external speakers, and the microphone and speakers are installed separately, and the sound of the broadcast is more louder</p>
<p>External Speaker Power</p>	<p>The external speaker power can only be selected in the "external voice box" mode, which is 10W / 20W / 30W and the impedance of using the speaker is 4 Ω .It is important to note that the corresponding power source is the power supply of POE (or 12VDC) / 18VDC / 24VDC 2A</p>

## c) Video

This page allows you to set the video capture and video encode.

### Local Mode

The screenshot shows the 'Video' configuration page in the Fanvil web interface. The left sidebar is red and contains a navigation menu with the following items: System, Network, Line, Intercom settings (highlighted), Security settings, and Function Key. The main content area has a dark red header with tabs for Features, Audio, Video (selected), MCAST, Action URL, and Time/Date. Below the tabs, the 'Video' section is active. It contains two main settings areas: 'Ip Camera Connect Settings' and 'Video Capture'. 'Ip Camera Connect Settings' includes a 'Connect Mode' dropdown menu set to 'Local' and an 'Apply' button. 'Video Capture' includes several settings: IRCUT Mode (Automatic), White Balance (Automatic), Anti Flicker (Disable), IR Swap (Disable), Backlight Compensation (Disable), Day/Night Mode (Automatic), Horizon Flip (Enable), Vertical Flip (Enable), DNC Threshold (29), and AutoFill Sensitivity (5). At the bottom of the 'Video Capture' section, there are 'Default' and 'Apply' buttons.

- > Network
- > Line
- > Intercom settings
- > Security settings
- > Function Key

**Video Encode>>**

	Main Stream	Sub Stream
Encode Format	H264	H264
Resolution	720P	CIF
Frame Rate	20	20
Bitrate Control	VBR	VBR
Quality	General	General
Bitrate	1700	318
I Frame Interval	2 (2~12)S	2 (2~12)S
Activate	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

---

**RTSP Information**

Main Stream Url : [rtsp://172.18.2.170/user=admin&password=tjwpo6&channel=1&stream=0.sdp?real\\_stream](rtsp://172.18.2.170/user=admin&password=tjwpo6&channel=1&stream=0.sdp?real_stream)

Sub Stream Url : [rtsp://172.18.2.170/user=admin&password=tjwpo6&channel=1&stream=1.sdp?real\\_stream](rtsp://172.18.2.170/user=admin&password=tjwpo6&channel=1&stream=1.sdp?real_stream)

<b>Camera Connect Settings</b>	
Field Name	Explanation
Connect Mode	Local: Connect the original camera External: Connect to other manufacturers camera
<b>Video Capture(Local Mode)</b>	
IRCUT Mode	Auto: IRCUT switches according to the actual ambient light level of the camera Synchronization: The switching of the IRCUT is determined by the actual brightness of the IR lamp.
Day/Night Mode	Automatic: automatically switches according to the DNC Threshold and the brightness of the actual environment where the camera is located Day Mode: The camera's video screen is always colored, if there is IR-cut will be synchronized to switch. Night Mode: the camera's video screen is always black and white, if there is IR-cut will be synchronized switch.
White Balance	Automatic: Automatically adjusts according to the actual environment in which the camera is located. Outdoor: installed in the outdoor preferred. Indoor: installed in the room preferred.
Horizon Flip	The video is flipped horizontally
Anti Flicker	Enable the option. In a fluorescent environment can eliminate the video horizontal scroll
Vertical Flip	The video is flipped horizontally
IR Swap	IR-cut filter switch
DNC Threshold	In the Day / Night mode Auto option, the color switching black and white threshold is set
Backlight	In front of a very strong background light can see people or objects clearly

Compensation	
AutoFill Sensitivity	In the environment changes in light and shade, the higher the sensitivity the faster the video changes
<b>Video Encode(Local Mode)</b>	
<b>Field Name</b>	<b>Explanation</b>
Encode Format	Only H.264 encoding format is supported
Resolution	Main stream: support 720P Sub-stream: you can select CIF (352 * 288), D1 (720 * 576)
Frame Rate	The larger the value is, the more coherent the video would be got; not recommend adjusted.
Bitrate Control	CBR: If the code rate (bandwidth) is insufficient, it is preferred. VBR: Image quality is preferred, not recommended.
Quality	Video quality adjustment, the better the quality needs to transfer faster
Bit rate	It is proportional to video file size, not recommend adjusted.
I Frame Interval	The greater the value is, the worse the video quality would be, otherwise the better video quality would be; not recommend adjusted.
Activate	When you selected it, the stream is enabled, otherwise disabled
Preview	copy and paste the main stream or sub-stream Url into the VLC player, or click [Preview] to display the current camera video.

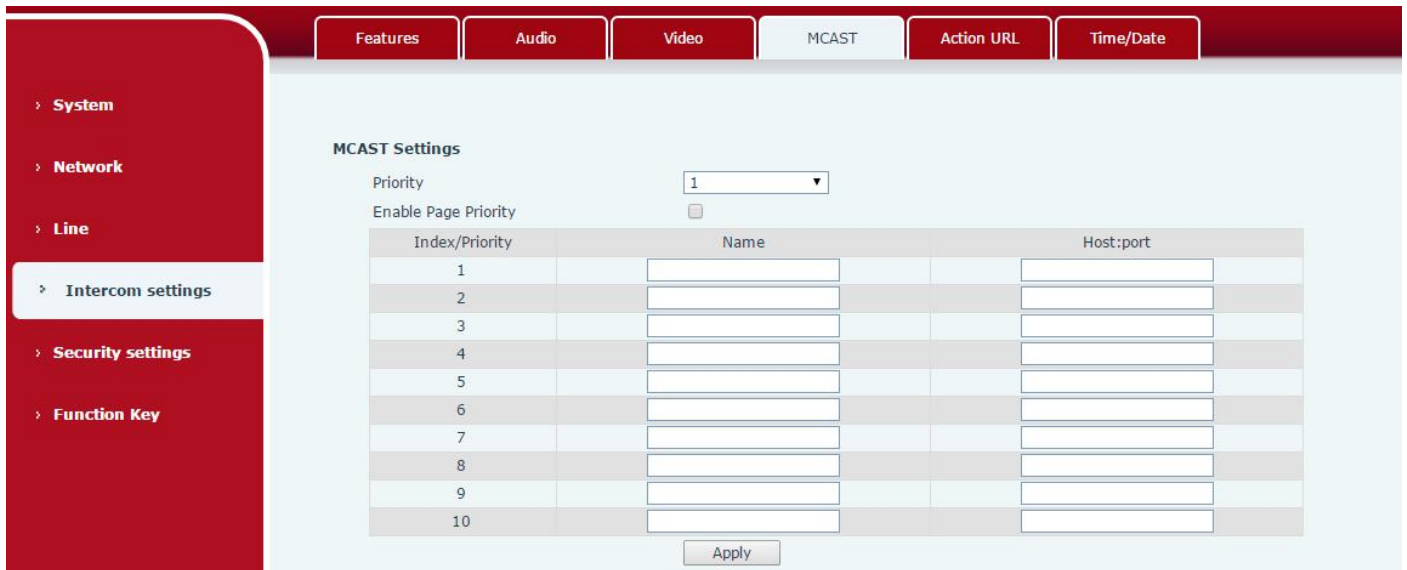

## External Mode

The screenshot shows the 'Video' configuration page in the Fanvil interface. The left sidebar has 'Intercom settings' selected. The main content area is titled 'Ip Camera Connect Settings' and includes a 'Connect Mode' dropdown set to 'External' with an 'Apply' button. Below this is the 'Ip Camera Settings' section with the following fields: Position (ipCameraName, 40 Characters), User (admin), Password, Ip Camera Brand (XM), IP (172.18.3.64), and Port (554), each with an 'Apply' button. At the bottom, 'RTSP Information' displays the Main Stream Url and Sub Stream Url, both with 'Preview' buttons.

<b>Connection mode</b>	Select external, click [Apply], restart the device
<b>IP Camera Settings(External Mode)</b>	
<b>Field Name</b>	<b>Explanation</b>
User name	External camera login required account
Password	External camera login password required
Camera type	Select the camera manufacturers
IP address	IP address of the camera, please use the camera matching scan tool to obtain the IP address
Port	Camera port number
RTSP information	Click [Apply], the connection automatically shows the camera does not show the reverse
Preview	Copy and paste the main stream or sub-stream Url into the VLC player, or click [Preview] to display the current camera video

## d) MCAST

It is easy and convenient to use multicast function to send notice to each member of the multicast via setting the multicast key on the device and sending multicast RTP stream to pre-configured multicast address. By configuring monitoring multicast address on the device, the device monitors and plays the RTP stream which sent by the multicast address.

## MCAST Settings

Equipment can be set up to monitor up to 10 different multicast addresses, used to receive the multicast RTP stream sent by the multicast address.

Here are the ways to change equipment receiving multicast RTP stream processing mode in the web interface: set the ordinary priority and enable page priority.

- **Priority:**

In the drop-down box to choose priority of ordinary calls, if the priority of the incoming streams of multicast RTP, lower precedence than the current common calls, device would automatically ignore the group RTP streams. If the priority of the incoming stream of multicast RTP is higher than the current common calls priority, device would automatically receive the group RTP streams, and keep the current common calls in maintained status. You can also choose to disable the function in the receiving threshold drop-down box, the device would automatically ignore all local network multicast RTP streams.

- **The options are as follows:**

- ✧ 1-10: To definite the priority of the common calls, 1 is the top level while 10 is the lowest
- ✧ Disable: ignore all incoming multicast RTP streams
- ✧ Enable the page priority:

Page priority determines the device how to deal with the new receiving multicast RTP streams when it is in multicast session currently. When Page priority switch is enabled, the device would automatically ignore the low priority multicast RTP streams but receive top-level priority multicast RTP streams, and keep the current multicast session in maintained statu; If it is not enabled, the device would automatically ignore all receiving multicast RTP streams.

● **Web Settings:**

**MCAST Settings**

Priority

Enable Page Priority

Index/Priority	Name	Host:port
1	ss	239.1.1.1:1366
2	ee	239.1.1.1:1367

The multicast ss priority is higher than that of ee; ss has the highest priority.

Note: when you press the multicast key for multicast session, both multicast sender and receiver would beep.

**Listener configuration**

**MCAST Settings**

Priority

Enable Page Priority

Index/Priority	Name	Host:port
1	group 1	224.0.0.2:2366
2	group 2	224.0.0.2:1366
3	group 3	224.0.0.6:3366
4		
5		
6		
7		
8		
9		
10		

● **Blue part (name)**

"Group 1", "Group 2" and "Group 3" are your setting monitoring multicast name. The group name would be displayed on the screen when you answer the multicast. If you have not set, the screen would display the IP: port directly.

● **Purple part (host: port)**

It is a set of addresses and ports to listen, separated by a colon.

● **Pink part (index / priority)**

Multicast is a sign of listening, but also the monitoring multicast priority. The smaller number refers to higher priority.

● **Red part (priority)**

It is the general call, non-multicast call priority. The smaller number refers to higher priority. The followings would explain how to use this option:

- ✧ The purpose of setting monitoring multicast "Group 1" or "Group 2" or "Group 3" is to launch a multicast call.
- ✧ All equipment has one or more common non multicast communication.
- ✧ When you set the priority as disabled, any level of multicast would not be answered, multicast call is rejected.
- ✧ when you set the priority as some value, only the multicast higher than the priority can come in. If you set the priority as 3, group 2 and group 3 would be rejected, for its priority level is equal to 3 and less

than 3; multicast 1 priority is set up with 2, higher than ordinary call priority, device can answer the multicast message, at the same time, holding the other call.

- **Green part (Enable Page priority)**

Set whether to open multicast comparison function, multicast priority is pink part number. Following explains how to use:

- ✧ The purpose of setting monitoring multicast "group 1" or "group 3" is listening "group of 1" or "group 3" multicast call of multicast address.
- ✧ The device has a path or multi-path multicast calls, such as listening to "multicast information group 2".
- ✧ If multicast is a new "group 1", and because the priority of group 1 is 2, higher than the current call priority 3 of "group 2", so multicast call would come in.
- ✧ If multicast is a new "group 3", and because the priority of group 3 is 4, lower than the current call priority 3 of "group 2", the device would listen to the "group 1" and maintain the "group 2".

## Multicast service

- **Send:** when you configure the item, pressing the corresponding key on the equipment shell, equipment would directly enter the Talking interface; the premise is to ensure no current multicast call and three-way conference, so the multicast can be established.
- **Monitor:** IP port and priority are configured to monitor the device, when the call is initiated by multicast and the call is successful; the device would directly enter the Talking interface.

## e) Action URL

Event	Configuration Field
Active URI Limit IP	<input type="text"/>
Setup Completed	<input type="text"/>
Registration Succeeded	<input type="text"/>
Registration Disabled	<input type="text"/>
Registration Failed	<input type="text"/>
Off Hooked	<input type="text"/>
On Hooked	<input type="text"/>
Incoming Call	<input type="text"/>
Outgoing calls	<input type="text"/>
Call Established	<input type="text"/>
Call Terminated	<input type="text"/>
DND Enabled	<input type="text"/>
DND Disabled	<input type="text"/>
Mute	<input type="text"/>
Unmute	<input type="text"/>
Missed calls	<input type="text"/>
IP Changed	<input type="text"/>
Idle To Busy	<input type="text"/>
Busy To Idle	<input type="text"/>

### Action URL Event Settings

URL for various actions performed by the phone. These actions are recorded and sent as xml files to the server. Sample format is http://InternalServer /FileName.xml

## f) Time/Date

Time/Date	
Field Name	Explanation
<b>Network Time Server Settings</b>	
Time Synchronized via SNTP	Enable time-sync through SNTP protocol
Time Synchronized via DHCP	Enable time-sync through DHCP protocol
Primary Time Server	Set primary time server address
Secondary Time Server	Set secondary time server address, when primary server is not reachable, the device would try to connect to secondary time server to get time synchronization.
Time zone	Select the time zone
Resync Period	Time of re-synchronization with time server
<b>Date Format</b>	

12-hour clock	Set the time display in 12-hour mode
Date Format	Select the time/date display format
<b>Daylight Saving Time Settings</b>	
Location	Select the user's time zone according to specific area
DST Set Type	Select automatic DST according to the preset rules of DST, or you can manually input rules
Offset	The DST offset time
Month Start	The DST start month
Week Start	The DST start week
Weekday Start	The DST start weekday
Hour Start	The DST start hour
Month End	The DST end month
Week End	The DST end week
Weekday End	The DST end weekday
Hour End	The DST end hour
<b>Manual Time Settings</b>	
The time might be set manually, needed user to disable SNTP service first.	

## (5) Security settings

- > System
- > Network
- > Line
- > Intercom settings
- > Security settings
- > Function Key

**Input Settings**

Input Detect  
 Trigger Mode: Low Level Trigger(Close Trigger)  Alert message send to server

**Output Settings**

Output Response  
 Output Level: High Level(NO:closed)      Output Duration: 5 (1~600) s

**Alert Trigger Setting**

Alarm Ring Duration: 5 (1~600) s

Input Trigger: Enable Ring      DTMF Output Last: By Duration

Remote DTMF Trigger: Enable Ring      DTMF Trigger Code: 1234

Remote SMS Trigger: Enable Ring      Trigger Message Format: ALERT=OUT1\_SOS

Call State Trigger: Talking

---

**Server Settings**

Server Address:       Send message to the server when the alarm is triggered

Message: Alarm\_Info:Description=PA2;SIP User=;Mac=00:a8:23:6a:6d:76;IP=172.18.2.170;port=Input1

Field Name	Field Name	
<b>Input settings</b>		
Input Detect	Enable or disable Input Detect	
Trigger Mode	When choosing the low level trigger (Closed Trigger), detect the input port (low level) closed trigger.	
	When choosing the high level trigger (Disconnected Trigger), detect the input port (high level) disconnected trigger.	
Alert message send to server	Enable or disable Input port send message to server	
<b>Output Settings</b>		
Output Response	Enable or disable Output Response	
Output Level	When choosing the low level (NO: open), when meet the trigger condition, trigger the NO port disconnected.	
	When choosing the high level (NO: closed), when meet the trigger condition, trigger the NO port close.	
Output Duration	The port changes the duration. The default is 5 seconds.	
<b>Alert Trigger Setting</b>		
Alarm Ring Duration	duration of alarm ring	
Input Trigger	When the input port meet to trigger condition, the output port will trigger(The Port level time change, By < Output Duration > control). You can choose to enable or disable the ringtone	
DTMF Output Last	By duration	The Port level time change, By < Output Duration > control
	By Calling State	By call state control, after the end of the call, port to return the default state
Remote DTMF Trigger	Received the terminal equipment to send the DTMF password, if correct, which triggers the corresponding output port. You can choose to enable or disable the ringtone	
DTMF Trigger Code	During the call, receive the terminal equipment to send the DTMF password, if correct, which triggers the corresponding output port. The default is 1234.	
Remote SMS Trigger	Enable or disable Remote SMS Trigger . You can choose to enable or disable the ringtone	
Trigger Message Format	In the remote device or server to send instructions to ALERT=[instructions], if correct, which triggers the corresponding output port	

Call State Trigger	The port output continuous time synchronization and trigger state changes, including the trigger conditions. Four models, such as: call trigger output port, will be in a call state to continue to respond) 1, Taking; 2, Taking and ringing; 3, ringing; 4, Call.
<b>Server Settings</b>	
Server Address	Configure remote response server address(including remote response server address and tamper alarm server address). When the input port is triggered will send a short message to the server, the message format is as follows: Alarm Info: Description=PA2;SIP User=;Mac=00:a8:34:68:23:d1;IP=172.18.2.243;port=Input1

## (6) Function Key

### a) Function Key Settings

**Function Key Settings**

Input port Multiplexing as DSS Key2

Key	Type	Number 1	Number 2	Line	Subtype
DSS Key 1	Key Event			SIP1	OK
DSS Key 2	None			SIP1	Speed Dial

**Advanced Settings**

Use Function Key to Answer:

Enable Speed Dial Hangup:

Hot Key Dial Mode Select:

Call Switched Time:  (5~50)S Day Start Time:  (00:00~23:59) Day End Time:  (00:00~23:59)

### ➤ Key Event

You might set up the key type with the Key Event.

Key	Type	Number 1	Number 2	Line	Subtype
DSS Key 1	Key Event			SIP1	None Release
DSS Key 2	None			SIP1	Speed Dial

Type	Subtype	Usage
Key Event	None	No responding
	Release	Delete password input, cancel dialing input and end call
	OK	identification key

## ➤ Hot Key

You might enter the phone number in the input box. When you press the shortcut key, equipment would dial preset telephone number. This button can also be used to set the IP address: you can press the shortcut key to directly make a IP call.

Key	Type	Number 1	Number 2	Line	Subtype
DSS Key 1	Hot Key			SIP1	Speed Dial
DSS Key 2	None			SIP1	Intercom

Type	Number	Line	Subtype	Usage
Hot Key	Fill the called party's SIP account or IP address	The SIP account corresponding lines	Speed Dial	Using Speed Dial mode together with <input type="checkbox"/> Enable Speed Dial Hangup <input type="checkbox"/> Enable, can define whether this call is allowed to be hung up by re-pressing the speed dial key.
			Intercom	In Intercom mode, if the caller's IP phone supports Intercom feature, the device can automatically answer the Intercom calls

## ➤ Multicast

Multicast function is to deliver voice streams to configured multicast address; all equipment monitored the multicast address can receive and play it. Using multicast functionality would make deliver voice one to many which are in the multicast group simply and conveniently.

The Function Key multicast web configuration for calling party is as follow:

Key	Type	Number 1	Number 2	Line	Subtype
DSS Key 1	Multicast			SIP1	G.722

G.711A  
 G.711U  
**G.722**  
 G.723.1  
 G.726-32  
 G.729AB

Type	Number	Subtype	Usage
Multicast	Set the host IP address and port number; they must be separated by a colon	G.711A	Narrowband speech coding (4Khz)
		G.711U	
		G.722	Wideband speech coding (7Khz)
		G.723.1	Narrowband speech coding (4Khz)
		G.726-32	
G.729AB			

◆ operation mechanism

You can define the Function Key configuration with multicast address, port and used codec. The device can configure via WEB to monitor the multicast address and port. When the device make a multicast, all devices monitoring the address can receive the multicast data.

◆ calling configuration

If the device is in calls, or it is three-way conference, or initiated multicast communication, the device would not be able to launch a new multicast call.

## b) Advanced Settings

Advanced Settings	
Field Name	Field Name
Input Port Multiplexing 2	Enable or disable input port reuse for DSS key 2.
Use Function Key to Answer	Enable or disable DSS Key answer
Enable Speed Dial key Hang up	Enable or disable the DSS Key to hang up
Hot Key Dial Mode Select	<p>Number 1 Transfer Call Number 2 Mode Select.</p> <p>&lt;Primary /Secondary&gt;mode allow system to call primary extension first, if there is no answer, system would cancel the call and then call secondary extension automatically.</p> <p>&lt;Day/Night&gt;mode allow system to check the calling time is belong to day time or night time, and then system decides to call the number 1 or number 2 automatically.</p> <p>Users just press speed dial key once.</p>
Call Switched Time	Set number 1 to transfer call number 2 time, default 16 seconds
Day Start Time	The start time of the day when you select<Day/Night>mode.
Day End Time	The end time of the day when you select <Day/Night>mode.

## V. Appendix

### 1. Technical parameters

<b>Communication protocol</b>		SIP 2.0(RFC-3261)
<b>Main chipset</b>		Broadcom
<b>Speech flow</b>	<b>Protocols</b>	RTP
	<b>Decoding</b>	G.729、 G.723、 G.711、 G.722、 G.726
<b>WAN</b>		10/100BASE-TX s Auto-MDIX, RJ-45
<b>MIC(Optional)</b>		Speaker audio line signal output impedance 32 Ohm Sensitivity: -38dB, bias voltage 2.2V
<b>Headset(Optional)</b>		Speaker audio line signal output impedance 32 Ohm, single ended output voltage 1.2V, used for external headphones or active speakers
<b>LED</b>		Output 5V voltage 5 mA current, can be an external LED, indicating the network status, call status, registration status.
<b>Recording</b>		the local microphone voice and call voice mixed output, suitable for computer and other equipment recording. Output impedance 15 Ohm.
<b>Speaker(Optional)</b>		Intercom mode 8Ω / 5W,internal magnetic horn, diameter: 57mm,Output power can support 4 Ohm: POE / 10W, 12V / 10W, 18V / 20, 24V / 30W
<b>Camera(Optional)</b>		1/4 "color CMOS, 1 megapixel, wide angle
<b>Power supply mode</b>		12~24V 2A DC or PoE
<b>PoE</b>		PoE 802.3af (Class 3 - 6.49~12.95W)
<b>Cables</b>		CAT5 or better
<b>Shell Material</b>		Aluminum alloy
<b>Working temperature</b>		-30°C to 70°C
<b>Storage temperature</b>		-40°C to 70°C
<b>Installation way</b>		Embedded or desktop
<b>External size</b>		113x83x28mm
<b>Package size</b>		138x108x77mm
<b>Equipment weight</b>		250g

### 2. Basic Functions

- 2 SIP lines
- PoE Enabled

- External power supply
- Supports two lines RTSP
- button or remote volume adjustment
- switch signal input and output
- Talkback recording output
- Default auto answer
- Dynamic multicast function
- Support for Function key interface
- Support monophonic active speakers
